

IT ASSET MANAGEMENT AND HARDWARE LIFECYCLE POLICY

1. Asset Issuance and Primary Responsibilities

The Information Technology Department furnishes each employee with modern computing hardware engineered to fulfill operational responsibilities safely and efficiently.

Standard issue equipment includes:

- Company laptop computer (Apple MacBook Pro or Dell XPS series)
- Power adapter and dual monitor desktop docking station
- FIDO2 physical hardware security key (YubiKey)
- Digital building access badge and smartcard credentials

All physical hardware remains company property and is tracked via unique asset barcode serial numbers in the centralized IT Asset Management database.

2. Hardware Refresh and Upgrade Lifecycle

To maintain peak performance, battery reliability, and operating system security patch support, company laptops follow a scheduled replacement lifecycle:

- Standard Engineering and General Staff Laptops: Eligible for automatic hardware refresh every thirty-six (36) months from initial commissioning date.
- Premature Hardware Replacements: Equipment suffering catastrophic non-cosmetic component failures (e.g., motherboard, logic board, or display panel failures) will be replaced immediately upon IT diagnostic validation.

3. Lost, Stolen, or Damaged Equipment Reporting

If company hardware is lost, stolen, or compromised:

- Immediate 2-Hour Notification: The employee must contact the IT Security Operations Center (SOC) at emergency-soc@company.internal or +1-800-555-0911 within two (2) hours of discovering the loss.
- Immediate Remote Wipe: IT Security will trigger an encrypted remote lock and zeroize command via Mobile Device Management (MDM) to safeguard internal databases and corporate intellectual property.
- Police Report: Stolen assets require filing a municipal police report within 24 hours, with a verified copy of the police report case number transmitted to IT Asset Operations.

4. Equipment Handover upon Separation of Employment

Upon voluntary resignation, retirement, or involuntary employment separation:

- Return Deadline: All company hardware assets, peripherals, charging adapters, security keys, and access badges must be delivered to IT Operations within three (3) business days following the official last day of work.
- Prepaid Shipping Kits: For distributed remote staff members, IT Operations dispatches a secured prepaid courier return shipping kit with custom shock-absorbent foam enclosures.
- Failure to Return: Failure to return company hardware within 14 business days may result in payroll deduction where permitted by jurisdictional labor law, and disabling of serial-locked devices.
